

World Structured Cabling 2022

Key Findings

Most of the countries researched in 2021 recovered from the pandemic and were back at 2019 level at the end of 2021. The recovery was aided by price increases, which in many countries were very significant, while most countries were still below 2019 level measured in volume/copper cable meters sold. The recovery was typically more radical in countries that experienced the steepest decline in 2020. One exception is India, where recovery is expected in 2022.

An update of BSRIA's World Overview and 16 countries has been published end of March/early April, 2022. The new reports shed light on USA, Canada, Brazil, Mexico, Chile, China, Australia, India, South East Asia, Germany, UK, France, Spain, Belgium, Portugal and Sweden cabling markets.

BSRIA's Worldwide Market Intelligence division (WMI) has been providing specialist market intelligence for over 30 years. Its multinational staff conducts primary and secondary research with a wide network of industry contacts to source detailed, reliable data across multiple product areas.

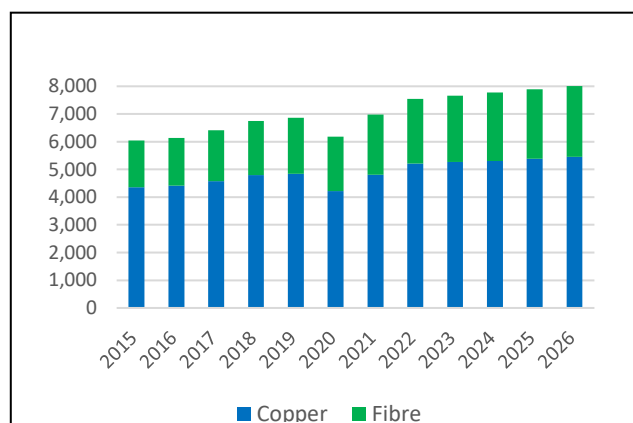

The study includes an overview of the global structured cabling market and 16 country reports published end of March 2022.

Table of Contents (country report)

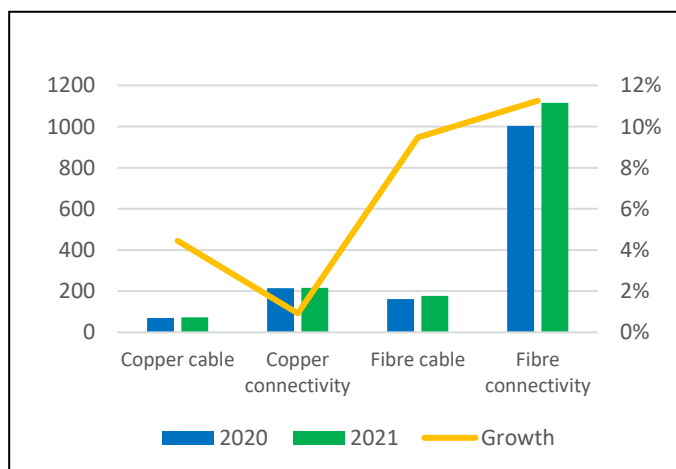

Available as a report in pdf and excel for 2017 – 2026

- Summary
- Market size & characteristics
- Market Drivers
- Forecast & trends
- Market supplies & market shares
- Supply channel & key distributors & contractors

Worldwide sales of structured cabling in LAN and DC, USD million

Global Data centre market, 2020 and 2021 (USD)

Why you need this report

The World excel overview provides information on market size, historic data and forecasts segmented by product type (data centre vs LAN, copper and fibre, cable and connectivity, Categories, MPO), sales by suppliers, covering 35 countries.

The World excel also includes a summary with key numbers and trends, an overview of the top 12 suppliers by product area and region. The country reports include detailed information about the market overall, LAN vs data centres, trends, forecast, key suppliers, segmentation by product type and channel to market.
