

World Structured Cabling 2019

Key Findings

A new overview of the global structured cabling market and 17 country reports will be published end of March 2019 and cover 2018 and forecasts to 2023.

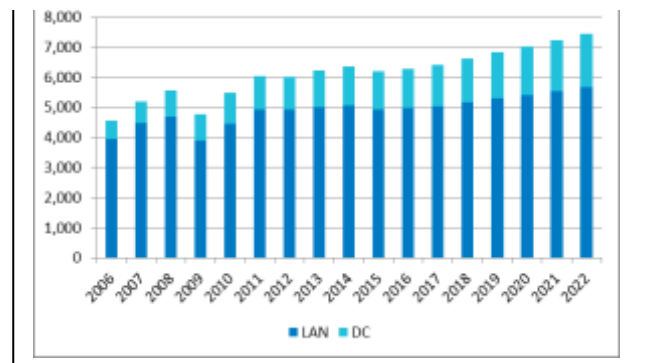

Many countries experienced decent growth in the LAN market in 2018 due to a favourable economic climate, the introduction of CPR in Europe and increasing uptake of plenum cables in Canada. The data centre market also showed significant growth particularly in Asia. The large colocation and hyper scale data centres are experiencing decent growth so BSRIA is now measuring sales of SM fibre cables and pre-term fibre connectivity by MM and SM. Sales of Cat 6A continue to increase driven partly by the increasing usage of PoE for wireless access points, cameras and other devices. In 2017 BSRIA reported Cat 6A share at 19% of all cabling systems by volume. The uptake of Cat 6A solutions is highest in Europe and the Middle East.

Table of Contents (country report)

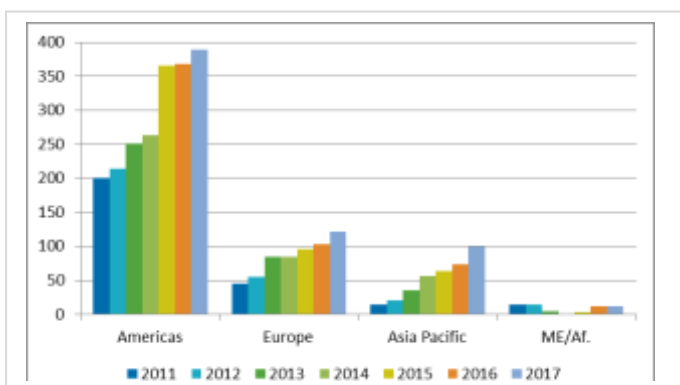

Available as a report in pdf and excel for 2015 – 2023

- Summary
- Market size & characteristics
- Market Drivers
- Forecast & trends
- Market supplies & market shares
- Supply channel & key distributors & contractors

Worldwide sales of structured cabling in LAN and DC, USD million

Worldwide sales of MPO/MTP by region, USD million, 2011 – 2017

Why you need this report

The World excel overview provides information on market size, historic data and forecasts segmented by product type (data centre vs LAN, copper and fibre, cable and connectivity, Categories, MPO) , sales by suppliers, covers 35 countries plus South East Asia.

The World excel also includes a summary with key numbers and trends, an overview of the top 12 suppliers by product area and region. The country reports include detailed information about the market overall, LAN vs data centres, trends, forecast, key suppliers, segmentation by product type and channel to market.
